PRODUCT OVERVIEW

What the sprint currently delivers

JPC Loop is a responsive school community website where students can view announcements, share posts, explore their house, browse school photos and sign in using a JPC account.

Core purpose

Bring JPC news, student discussion, house identity and school media into one recognisable online space.

Current technical state

IMPLEMENTED

Firebase Authentication and Cloud Firestore are connected in the current code. Posts and homepage previews update in real time.

Typical user journey

1. Arrive
Homepage hero and latest posts

2. Explore
Feed, News, Houses or Gallery

3. Sign in
JPC email or Google

4. Participate
Create and manage posts

5. Return
See live community updates

Main sections

Home

School hero image, clear calls to action and three latest News and Feed previews.

Feed

Student community posts with title, description, author, timestamp and expandable cards.

News

School announcements. Only administrators are allowed to create news posts.

Houses

Rice, Kanea, La Salle, McKenna and MacKillop pages with information and individual feeds.

Gallery

Separate junior and senior image viewers with arrows and clickable thumbnails.

Guidelines

Eight clear expectations covering respect, safety, privacy, relevance and responsible posting.

CURRENT FEATURES

Navigation, content and interaction

Area	What is included now	User value / evidence to test
Global navigation	Logo link plus Home, Feed, News, Houses, Gallery, Guidelines and Sign in on every main page.	Users should reach any main area quickly and recognise where to sign in.
Homepage	Campus hero, Open Feed and Guidelines buttons, live previews of the latest three Feed and News posts.	Gives immediate orientation and makes recent content discoverable.
Posts	Create a title and description, receive an author and server timestamp, view newest first, expand cards, and deep-link directly to a post.	Supports timely, traceable school communication.
Post management	Authors can delete their own posts; administrators can delete any post; deletion requires confirmation.	Allows corrections and moderation while reducing accidental deletion.
News permissions	The Add post control is hidden unless the signed-in user has the admin role.	Protects official announcements from unauthorised publishing.
Language check	Titles and descriptions are checked against a blocked-word list before submission.	Provides a first moderation layer; testers should try spacing and punctuation edge cases.
House spaces	Five branded house cards lead to About sections and house-specific Firestore feeds.	Builds house identity and keeps house conversation separated.
Gallery controls	Junior and senior carousels, previous/next buttons, image wrapping and generated thumbnail buttons.	Students can browse visually and choose a specific photo.
Responsive layout	Flexible grids and mobile breakpoints at 900px, 700px and 600px.	Pages should remain readable on school laptops and phones.
Accessibility basics	Semantic headings, form labels, image alt text, button types and ARIA labels on gallery controls.	Improves keyboard/screen-reader meaning; full accessibility testing is still recommended.

> **Important sprint evidence:** demonstrate a post appearing live in another open browser tab, an author deleting their own post, and a non-admin being unable to create a News post.

ACCOUNTS AND DATA

Authentication, roles and Firebase

Account creation and sign-in

Email + password | Google popup | Sign out

Only addresses ending in **@jpc.school.nz** are accepted. Registration checks matching passwords and saves the display name.

Signed-in state

Firebase observes authentication changes. The sign-in form is replaced by the user's name, role and a Sign out button. The display name is also cached locally.

Firestore user record

Each UID stores display name, email, role, creation time and last login. New accounts default to the **user** role.

Role behaviour

User: create normal Feed/house posts and delete their own.
Admin: create News and delete any displayed post.

Live content

Firestore snapshot listeners refresh Feed, News, house feeds and homepage previews without a manual reload.

Data structure

Posts are grouped under **pages / page-name / posts**. Separate page names prevent Feed, News and each house from mixing.

Recommended sprint test session (15–20 minutes)

Choose testers	Observe	Record	Rate	Prioritise
5–8 students; include junior and senior users	Do not teach the interface while they work	Note success, hesitation, errors and exact comments	Collect the same 1–5 ratings from everyone	Fix repeated high-impact issues first

Tasks to give every tester

1	From Home, find the newest News post and return to Home.	□ Easy □ Hard
2	Sign in with a JPC account, then find where to sign out.	□ Easy □ Hard
3	Create a Feed post, expand it, then delete it.	□ Easy □ Hard
4	Find your house page and explain what can be done there.	□ Easy □ Hard
5	Use both arrows and a thumbnail in the Gallery.	□ Easy □ Hard
6	Find the rule about sharing private information.	□ Easy □ Hard

> **How to make feedback useful:** ask testers to think aloud. Record what they did, not only whether they "liked it." Avoid leading questions such as "Was the navigation easy?"

PRINT OR COPY INTO GOOGLE FORMS

Statement	Strongly disagree ← 1 2 3 4 5 → Strongly agree
I understood what JPC Loop is for.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5
The navigation labels were clear.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5
Signing in was straightforward.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5
Creating and reading posts felt easy.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5
The design felt appropriate for JPC.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5
I would use this website at school.	◯ 1 ◯ 2 ◯ 3 ◯ 4 ◯ 5

What was the most useful part?

What was confusing, slow or broken?

FEEDBACK TO ACTION

Turn responses into sprint decisions

Final tester questions

What one change would improve JPC Loop most?

What feature would make you return to the site?

Tester’s priority for the next sprint

□ Navigation	□ Posting	□ Accounts	□ Mobile design
□ Houses	□ Gallery	□ Safety	□ Other

Collate results from all testers

1. Count

Calculate task completion and average rating for each statement.

2. Group

Combine similar comments into themes such as navigation, posting or mobile.

3. Prioritise

Give repeated blockers more priority than one-off preferences.

Issue / evidence	Users affected	Impact 1–5	Effort 1–5	Next action

Write measurable next-sprint criteria

Format: “Given [starting state], when [user action], then [observable result].”
Example: Given a signed-in student, when they submit a valid Feed post, then it appears at the top of the Feed and in the Home preview without refreshing.

Keep evidence: save completed sheets, anonymised quotes, task completion totals, screenshots of issues and a short before/after explanation. This shows that stakeholder feedback directly influenced development.

Sprint decision

What will be changed next, and why?
